Get your family started

HB Pro gives your family one shared log for your dog's potty breaks, meals, training, crate time, and accidents. Check History to see what already happened and the Next panel to help plan the next outing.

Everyday access https://hb-pro-families.austinkalb.chatgpt.site/

1 Create your family

Ask the HB Pro organizer for a one-time signup code. Open HB Pro, choose **Sign Up with a Code**, and sign in with ChatGPT. Under **Create your family**, enter the signup code, your family name, and the email on your ChatGPT account. Select **Create family**, then enter your dog's name when prompted.

Under **Logging as**, enter your initials and select **Save initials**. Ask each family member to save their own initials so you can see who logged each event.

2 Delete the sample history before logging

New families start with example entries labeled Sample. Before logging your dog, open **History**, select **Delete Sample**, and confirm. One person can do this for the whole family. Real entries are kept.

3 Invite family members

Under **Family members**, enter the person's ChatGPT account email and choose **Create invitation code**. Copy the code and share it with them along with the HB Pro address. Each code is single-use, expires in seven days, and is tied to the invited email.

The invited person opens HB Pro, signs in with the invited ChatGPT account, pastes the code under **Join your family**, and selects **Join family**.

4 Save HB Pro to your phone's home screen

iPhone (Safari). Open the HB Pro address in Safari. Tap **Share** (in the page menu on some layouts), choose **Add to Home Screen**, turn on **Open as Web App** if shown, and tap **Add**.

Android (Chrome). Open HB Pro in Chrome. Tap the **three-dot menu**, choose **Add to Home screen** or **Install and create shortcut**, then choose **Create shortcut** or follow the install prompts and confirm.

Tap the new HB Pro icon for everyday access. The first time you open it, you may need to sign in again.

Log, review, and learn

Log activities now or at a chosen time

Log now. Add optional Notes, then tap the activity to save it at the current time. Use **Pee + Poop** when both happen at the same time.

Manual event entry. For something that happened earlier, choose the activity, date, and time. Add notes if helpful, then select **Save**.

When to turn Accident on

> **Accident marks a potty event in the wrong place.** For example, if your dog pees on the rug, turn **Accident** ON *before* tapping **Pee**. For a normal potty break in the designated spot, leave it OFF.

Accident applies to **Pee**, **Poop**, and **Pee + Poop**. For an earlier accident, turn it ON in **Manual event entry** before you save. The switch returns to OFF after the next successful save. History labels the saved entry **Accident**.

Forgot to mark an accident or turned it on by mistake? Find the entry in **History**, select **Edit**, change the Accident setting, and select **Save changes**.

Review History and check what is next

The **Next** times for Pee and Poop update as you log. Use them alongside your dog's behavior and usual routine. In **History**, use **Edit** to correct an entry or **Export CSV** to download the shared log.

Clear All clears the shared family history. If you have real entries you want to keep, export and review the log before clearing it.

View or run an analysis

Analyze Saved History opens the analysis screen. Select **View last analysis** to reopen a saved report. To create a new one, choose a date range with a saved pee or poop entry and select **Run analysis**. A report labeled **Starter sample** shows example data.
